Mammoth KIWI

ORGANIC Kiwi Program

Big Fruit, Bigger Benefits

Meet the Mammoth Kiwi—a giant among kiwis it's sure to make a BIG impression! Discovered in Greece and grown in California, the Mammoth Kiwi stands out with its impressive size—50% larger than the traditional Hayward variety. More than just exceptional in size, this fruit is packed with nutritional benefits.

Mammoth Kiwi is a superfruit with over double the antioxidants and Vitamin C of a regular kiwi. It's packed with more potassium than a banana and more fiber than bran cereal. Ideal for health-conscious consumers seeking extraordinary nutrition and flavor. It's not just bigger—it's better in every way.

Availability: November - March

Pack Styles:

Single Layer Tray | 160 cs/pallet

Volume Fill | 96 cs/pallet

20/1lb Clamshell | 75 cs/pallet

Ripening & Storage

You can tell if a kiwi is ripe if it yields to gentle pressure and has a pleasant, sweet smell. You can store ripe kiwifruit at room temperature for several days, or in the refrigerator for up to four weeks. If you have a Mammoth Kiwi that is too firm, simply leave it in a bowl at room temperature and it will ripen naturally over 2-3 days. If you need to ripen the kiwi faster, you can place it in a paper bag with other fruit to speed things up.
